

PetCare: Database Triggers in the Frontend

Mapping for triggers defined in `database/01_schema.sql`.

Trigger	Frontend Location	Role / Login	What It Demonstrates
TRG_PERSON_AUTO_ID	User Accounts, People Directory, Create Account	Admin, Supervisor, public registration	When a person is inserted with null PERSON_ID , Oracle generates P### .
TRG_SYSTEM_USER_AUTO_ID	User Accounts, People Directory, Create Account	Admin, Supervisor, public registration	When a login account is inserted with null USER_ID , Oracle generates U### .
TRG_PET_AUTO_LOCAL_ID	Pet Directory, Rescue Intake	Admin, Employee, Supervisor	New local pets get LP### ; guest pets get GP### through PETCARE_ID_CONTEXT .
TRG_MEDICAL_RECORD_AUTO_ID	Health Records	Employee, Doctor	New medical records get MR### automatically.
TRG_RESCUE_AUTO_ID	Rescue Operations	Volunteer	New rescue reports can receive generated rescue IDs such as R### .
TRG_ADOPTION_AUTO_ID	My Adoption Applications	Adopter	New adoption applications receive generated IDs such as AD### .
TRG_AUDIT_LOG_ID	System Activity	Admin	Every audit row receives a generated numeric audit ID, displayed in the UI as AU### .
TRG_ADOPTION_STATUS_AUDIT	Adoption Review, My Assigned Adoptions, System Activity	Supervisor, Employee, Admin	When adoption status changes, Oracle inserts an audit row. Admin sees it in System Activity.
TRG_ROLE_APP_NO_OWNER	Role Applications	All logged-in users	Prevents requesting the Owner role through role applications.
TRG_SALARY_PAYEE_ROLE	Payroll	Supervisor	Validates that the selected payee actually has the chosen Supervisor, Employee, or Doctor role.

Best Trigger Demo Order

1. Admin → User Accounts → create a Supervisor. Show generated **P###** and **U###**.
2. Employee/Admin → Pet Directory → create a pet. Show generated **LP###** or **GP###**.
3. Employee/Doctor → Health Records → create a health record. Show generated **MR###**.
4. Supervisor → Adoption Review → approve/reject an application, then Admin → System Activity. Show audit entry **AU###**.

Important Note

Browser messages such as “Please fill out this field” are frontend HTML validation, not database triggers. Database triggers run only after an insert or update reaches Oracle.
